Cau Giay, Ha Noi

SKILLS

PROGRAMMING LANGUAGE
Java (Spring Boot), PHP (Laravel)

DATABASE
SQL Server, MySQL, Oracle database.

ENGLISH
650 TOEIC

OTHERS
Redis, Docker, Kafka, Git.

STRENGTHS

- Proficient in teamwork.
- Problem-solving skills, particularly in logical reasoning and analytical thinking.
- Effective time management.

SUMMARY

Java Developer has experience in designing, developing, and maintaining Java-based applications. Proficient in Object-Oriented Programming, databases, and possesses knowledge of Spring Boot. Demonstrates the ability to quickly learn new technologies and adapt to evolving project requirements. Committed to developing high-quality software solutions and contributing to a dynamic team environment.

WORK EXPERIENCE

Intern **11/2023 - 2/2024**

VietSoftware International (VSII)

I had training in Spring Boot, knowledge about Oracle database, and utilized stored procedures to handle logic with Spring Boot. I was taught about security, algorithms such as RSA, AES for encrypting information. I have also been used to microservices and solved banking business functions.

Programming Collaborator **8/2022 - 8/2023**

RDSIC

articipated in web development, using Laravel framework, learning and developing MVC models using HTML, CSS, JS, Bootstrap. Learned Git and GitHub for collaborative team work. I am haved opportunities to explore Docker. I am participate in developing Solr Search, resolving the search issues on the website.
Projects I have contributed to:

- https://thoitrangwiki.com/
- https://xaydungso.vn/

EDUCATION

SOFTWARE ENGINEERING **2020 - 2024**

Hanoi University of Civil Engineering

PROJECTS

PERSONAL BLOG **11/2023 - 1/2024**

Leader, Coder

The website is developed using VueJS for design and Spring Boot for API development.
• Designing and deciding on the visual layout of a website.Technologies used: HTML/CSS/ JS,VUEJS framework, BOOSTRAP, utilizing TinyMCE for editor.
• On the backend, Spring Boot is created APIs for functionalities such as CRUD posts. Integrate with stored procedures and Hibernate ORM to enhance flexibility in SQL queries.
• Spring Security and JWT are utilized for the login process, authorization, and authentication including user roles (ADMIN, USER). Implement user authorization, restricting access to endpoints based on user permissions.
• Using Redis to optimize queries and enhance website performance.
• Testing APIs by Postman before it goes live top identify any problems.
